Leadership

GMP Energy Future
The Goals

- **Maintain a low carbon profile**
- **Stably priced and reliable power**
- **Use cost-effective efficiency and demand response to reduce load**
- **More in state generation**

**Meeting the
Goal **COST, CARBON
& RELIABILITY****

- **Aggressively purchase and build new renewable generation**
- **Negotiate new power contract with Hydro-Quebec**
- **If VY is relicensed, negotiate a favorable PPA and ramp down dependence**
- **Invest in efficiency and demand side management**

THE CHALLENGES

- ▶ Three-quarters of total power contracts expire in 2012 and 2015
- ▶ Contracts are low cost and low emission base load power
- ▶ In-state renewable energy & efficiency alone will not fill the void
- ▶ Building generation in Vermont must overcome:
 - ▶ Regulatory process
 - ▶ Economics
 - ▶ Public opposition

THE CHALLENGE

SUPPLY GAP

Stewardship

One legislators **View Point**

- It's low carbon
- Help secure good contract
- No other renewable has a limit
- "It's renewable, it's @#^#& Water

VY Cooling Tower Catastrophic Failure
